EAGLE EYE

The SEC Swiss Eagle Eye cable cam system offers a whole new range of camera motion possibilities. The Eagle Eye is a winch based 3 dimensional (XYZ) or 2d(V rig) system. The creators at SEC Swiss chose to build their system around the Shotover G1 gimbal. Used together they provide market leading gyro-stabili-zation, camera choice flexibility and state of the art technology. The Eagle Eye was designed to be quick to set up (4 hours typical install), light-weight, and user friendly. Safety is of the utmost importance and all com-ponents have a 10:1 safety ratio. Integrated power and fiber optic hard lines to the gimbal provide broad-cast markets full camera control and video without the need for wireless transmitters, making it both cost effective and reliable. The small foot print of the winches allow for minimal or zero seat kill at live events. They can also be placed on stadium/arena cat walks without creating an impassable work space. Low power consumption alleviates the need for additional power sources ie generator.

EAGLE EYE Features

- 3D or 2D/V rig option
- Fiber optic hard wired for 12G data rate
- 100m x 100m operating area
- Safe work area programable
- User defined points and paths
- Quick set up time, small footpring
- 10:1 safety rating on all components
- Electronic safety load limits

SHOTOVER G1 Quick Specs

- Gimbal Weight - 4kg (8.82 lbs)
- Integrated wireless
- 360° Continous Pan
- Tilt +65° to -120°
- Roll +/- 65°
- 100°/sec slew rate
- Operating temp. -20° to + 50° C
- Weather resistant
